COMMENTS:

This is an EMP Review for facility's NMP approved on December 7, 2015 by Hilary Collinsworth.

Producer said facility will be moved in the next year.

This facility is 100% third party exported

Application records are current.

In 2016:
approximately 420 tons of solids to Blaine
approximately 3000 tons of solids to Domingo Asumendi
approximately 93,577 gallons of liquids to Domingo Asumendi

In 2017:
Producer exported approximately 360 tons of solids to Blaine Lindley
3,000 tons of solids to Domingo Asumendi
approximately 93,577 gallons of liquids to Domingo Asumendi

There are no approved construction reports on file for Lagoon 1. By September 1, 2018 please schedule approval process with ISDA for Lagoon 1. This may include: liquid waste containment area emptied, liner inspected, possible modification, and dimensions recorded.

Compliance Date:

Terms of Compliance:

Remarks:

Weather is approximately 51 degrees F. and partly cloudy.

Corrals are dry and bedded with straw and dry compost mix.

The waste operation is located on the north side of the facility. Processed water goes to a concrete separator pit. Waste water then goes through pipes to another concrete separator pit before going through a pip over a ditch to Lagoon 1. Runoff from the corrals go into two drains that are located in each pen. The drains go into pipes that go to the concrete separator located right before Lagoon 1. All solids are removed from the corrals and are third party exported.

Lagoon 1 has approximately 1 foot of free-board at the time of inspection. When constructed, Lagoon 1 was documented as 4 feet deep.

Concrete Separation Pit 1 (directly west of parlor) is in use at the time of inspection. Suggest cleaning and or removing solids more frequently.

Concrete Separation Pit 2 (east of commodity barn. North west of parlor) is in use and in good condition at the time of inspection.

Solid Stack west of Lagoon 1 is contained at the time of inspection.

Terms of Compliance:

Remarks:

The waste operation for this facility is located on the north side of the facility. Waste water from the parlor and corral run off collects in a concrete box north of the eastern corrals. From there it is pumped across the canal northeast to the lagoon. All solids are removed from the corrals and are third party exported.

1a) Lagoon has approximately 2 feet of freeboard out of approximately 6 feet

Weather is approximately 35 degrees F and Cloudy

The corrals are wet but are scrapped.
